

Asset Tracking Solution

Every year thousands of dollars in assets are lost due to theft of high value equipment. **AWID** and Pramari have released their Asset Tracking solution which offers a low cost, highly efficient way of restricting assets to designated areas within a building. Assets are tagged with passive **RFID** tags; movement of such assets through **RFID** enabled doors automatically alarms security personnel.

The solution includes the following features:

- Asset Tracking Coverage for exit doors
- RFID Readers, Antennas, cables and power supplies
- Asset Tags
- Warm backup server
- Automated alarm and logging of loss or theft events

The base package can be expanded with additional options such as

- Ability to lock doors
- Ability to track assets' usage
- Integration with existing customer IT systems
- Integration with communication and security systems to send alerts
- Integration with Pramari's inventory management system, using same equipment as the asset tracking system.
