

Connecting the Internet of Things with People.

Smart Sensor Solution

Transcends' mission is to make RFID implementations simple. Prebuilt solution components ensure quick turnarounds and maximize your ROI.

Are you looking for an end to end solution to develop the next generation smart device - smart appliances, kiosks, store front, recreation etc.? Just plug it in, configure, start collecting UHF Gen2 information and publish to the cloud, social media and/or database and integrate your sensor data with your legacy informa-

Kiosk:

Connecting a customer's presence with current marketing activities and tying that into social media is becoming more and more a necessity and being required in today's connected world.

With the Smart Sensor solution you can detect the presence of your customer and record that event in real-time on facebook or twitter. Drawing attention to your products and company, driving more traffic and the ability to connect such activities to customer rewards can be fully automated.

← KIOSK

Specifications:

The solution includes the Rifidi Pi Appliance with a Thinkify TR-50 embedded or TR-200 desktop USB reader. Lightweight desktop / embedded RFID solution for low read rate (10 to 15 reads per sec typical) with low power consumption.
